## Ripping Audio CD

In this tutorial you can follow step by step the procedure for transferring audio files in Nero Move it from an Audio CD in the format that is ideal for the target device.

The following requirements have to be fulfilled:

- You have started Nero Move it.
- The device or devices that you want to use for exchanging media files are supported by Nero Move it and are available in the device list.

To transfer music files from an Audio CD to your PC, proceed as follows:

1. Insert your Audio CD into a drive.
2. Use the ▲ and ▼ buttons to navigate through the left device list and click the icon for your Audio CD.
  - The container and the workspace for the Audio CD are displayed.
3. Use the ▲ and ▼ buttons to navigate through the right device list and click the icon for your PC.
  - The container and the workspace for your PC are displayed.
4. Choose the **Music** category in the container area of the PC.
  - The media files contained are displayed in the respective workspace and any existing subfolders are displayed on the container.
5. Select the required files on the left workspace and click the  button.
  - The media files are copied to the right workspace. Nero Move it automatically transfers the data in the format that is ideal for the target device. A window notifies you as soon as the transfer has ended successfully.

All devices that have been connected with Nero Move it at least once are displayed in the device lists. Accordingly, you can access the container and workspace for a device even if the device is not currently connected to your PC.

If selected media files already exist on the target device or the device does not have enough free disk space for them, the **Comparison** window opens. You can decide which files should be replaced or updated individually in this window.

- You have transferred the required files.
